

Soapy Plants

Ashton wants to conduct an experiment. His question is:
Does the presence of soap in water affect the growth of a bean plant?

His hypothesis is:
If one bean plant is watered with soapy water and one bean plant is watered with fresh water, then the bean plant watered with soapy water will not grow as tall because soap has chemicals that might harm plants.

Your Turn

In spaces 1-5, write 5 steps that Ashton could take to conduct this experiment.
