WEATHER AND TEMPERATURE – ULTRA-VIOLET (RADIATION) – UV INDEX

UV Index – An internationally standardised open ended numerical scale developed by the World Health Organization that measures the amount of UV radiation reaching the earth's surface. It begins at zero and has no upper limit. The UV Index is often represented as a number line with accompanying action statements and descriptive words which convey UV intensity.

Earth Day Cleanups

Register Today!

We've been cleaning up Worcester on Earth Day since 1989

Each year volunteers come together to make Worcester **a healthy, clean and beautiful place to live, work and play.**

Registration is now open!

The REC Earth Day Cleanups will be on Saturday, April 22nd, 2023 from 8am-12pm.

QUESTIONS?

COMMUNITY: ENVIRONMENT – VOCABULARY

Atmosphere

–The mass of air surrounding the Earth.

Emissions

–Substances discharged into the air. Releases of pollutants from a variety of sources and activities, including vehicles, factories, power plants that make electricity, and wood-burning stoves and fireplaces, among others.

Fossil Fuel

–a fuel like oil or coal formed from very old plant and animal fossils. The main fossil fuels are coal, crude oil, natural gas, and peat. Burning **fossil fuels** is a major cause of global warming.

Ozone

–A gas that occurs both in the Earth’s upper atmosphere and at ground level.

Ozone can be “good” or “bad” for people’s health and the environment, depending on its location in the atmosphere.

High up in the atmosphere, ozone helps protect people’s health from too much ultraviolet radiation from the sun.

Near the Earth’s surface, ozone is an air pollutant that can result in breathing difficulties.

Community: Environment - Most Polluted Countries

Top 10 most polluting countries 2022

In 2020, global carbon emissions reached **32 billion tonnes of CO2 in the atmosphere**, a record that is likely to be quickly overtaken, as the projected trajectory of future emissions doesn't predict any decrease.

Source: [BP Statistical Review of World Energy 2021](#)

The most densely populated and industrialised countries are therefore at the top of the list of the world's most polluted countries. The three countries with the highest CO2 emissions are:

- 1 China with **9.9 billion tonnes of CO2 emissions**, largely due to the export of consumer goods and its heavy reliance on coal;
- 2 The United States with **4.4 billion tonnes of CO2** emitted;
- 3 India with **2.3 billion tonnes of CO2** emitted.

Grammar Practice Worksheets

💡 Int 🎓 Teens & Adults

In this lesson, students learn about the different types of conjunctions (coordinating, correlative, and subordinating) and how they're used to join sentence elements. They also learn how to punctuate sentences with conjunctions.

This lesson can easily be divided into three parts (to cover one type of conjunction at a time) or completed all at once for a comparison of conjunction types.

Form

Some conjunctions are used in pairs. They use **parallel** structure, which means that the **same** grammatical forms appear on each side of the conjunctions. Correlative conjunctions can join two parts of speech (e.g., N + N), phrases (VO + VO), or clauses (e.g., SVO + SVO).

Purpose

The first part of the correlative conjunction pair is mainly used for emphasis. The **emphasis** is on "more than one" (*both, not only*) or on the choice (*either, neither, whether*). In some cases (*both/and, either/or*), the first part of the pair can be dropped from the sentence without affecting meaning.
